

LakeSmart Design Sheet

We have included this sheet in your pre-workshop packet so you will have a diagram to work from during the landscape-design activity at the workshop. This side shows a typical property. Use the back side to make a simple plan of your property. Doing this drawing ahead of time will save you time at the workshop and insure you come home with a plan of action that beautifies your property and reduces harm to your lake.

Make a working diagram of your land by sketching as many of the following. Graph paper is included but you do not have to draw to scale.

- Impervious areas - buildings, decks, driveways, parking, etc.
- Recreational areas - barbecue pit, playing areas, boat storage, etc.
- Lawn, garden beds, groundcovers, trees, shrubs, areas of natural vegetation
- Problem areas - too much foot traffic, wet spots, steep areas, etc.
- Septic tank and leach field
